

December 16, 2020

To Whom It May Concern:

I would like to recommend Jugveer Sandher to pursue further practical and educational opportunities in software programming.

Jugveer took the Programming Fundamentals in Python (COMP 1516) course I taught in the Fall 2020 term at the British Columbia Institute of Technology (BCIT). The course involved learning about basic programming concepts using the Python as the reference programming language. Topics included variables and expressions, arithmetic operations, functions and modules, logic, loops, data structures, regular expressions and exception handling.

Jugveer was a conscientious student attending all online classes and completing all assigned work in a high-quality manner. He proactively leveraged additional resources such as the class Slack workspace and online office hours to ask questions and clarify concepts on course topics and assigned work. Jugveer placed the top 10% of the class in terms of both final exam score and overall grade.

Feel free to contact me if you have any further questions.

Sincerely,

A handwritten signature in black ink, appearing to read 'm. mulder'.
